Every last member of the crew from CNA’s to doctors to nurses worked very well together. Made you feel like you were number one. I would recommend it to anyone.”

The Aspirus Rehabilitation Unit Difference

How do we consistently score above other rehabilitation facilities in patient care quality?

The Aspirus Rehabilitation Unit difference combines:

- A firm commitment to involving patient and family in the plan of care.

- Setting clear goals that challenge and motivate patients to achieve an improved level of independence.

- A Rehab Team that meets daily to coordinate care, to evaluate progress towards goals, and to identify any barriers to reaching those goals.

For more information about the Aspirus Rehabilitation Unit or to refer a patient, call our Rehab Referral Coordinator 715.847.2450.

Commission for Accreditation of Rehab Facilities (CARF), accredited since 1993

Aspirus Wausau Hospital, Inc.
We provide a safe, positive environment where individuals who have been disabled by illness or injury can enable themselves to reach their potential, accept responsibility for their lives, and live a lifestyle acceptable to them.

**Our Mission**

**Benchmark Leader**

In a 2014 Uniform Data System for Medical Rehabilitation (UDSMR) report, the Rehabilitation Unit at Aspirus Wausau Hospital was a benchmark leader in quality outcome scores for patient functional improvement and discharge to home. The Aspirus Rehabilitation Unit outperformed regional and national rehab facilities and was ranked in the top 3% for inpatient facilities evaluated by UDSMR.

*Uniform Data System for Medical Rehabilitation, a division of UB Foundation Activities, Inc., University at Buffalo, The State University of New York, analyzes and reports yearly data comparing patient outcomes of inpatient and free-standing rehab facilities.*

**Higher and faster rate of improvement**

We help patients become more functional in their daily living activities, and we get them home an average of two days sooner than the national average.

**More patients discharged to home**

A vital part of recovery for patients is the ability to be discharged directly to the comfort of their own home or the familiar surroundings of their Community Based Residential Facility (CBRF). Aspirus Rehabilitation Unit excels in getting patients functioning to a level where they can go directly back into the community and establish their life patterns.
