

Cleaning and Disinfecting Your Building or Facility

Close off areas used by the person who is sick. Companies do not necessarily need to close operations, if they can close off affected areas.

Open outside doors and windows to increase air circulation in the area.

Wait 24 hours before you clean or disinfect. If 24 hours is not feasible, wait as long as possible.

Clean and disinfect all areas used by the person who is sick, such as offices, bathrooms, common areas, shared electronic equipment like tablets, touch screens, keyboards, remote controls, and ATM machines.

Once area has been appropriately disinfected, it can be opened for use. Workers without close contact with the person who is sick can return to work immediately after disinfection.

If more than 7 days since the person who is sick visited or used the facility, additional cleaning and disinfection is not necessary.

Daily Practices

Continue routine cleaning and disinfection. This includes everyday practices that businesses and communities normally use to maintain a healthy environment.
