

Steps to install the VPN Client (Windows 7 Version)

Please note: You must be a local admin on the computer.

Click on [Click Here To Install the VPN.](#)

Enter your credentials:

rha\"username\" (ie john jones = rha\jonjoh)

Password = your network logon password

Click the [Login](#) button

You will then come to this screen:

Click [Install](#) at the bottom

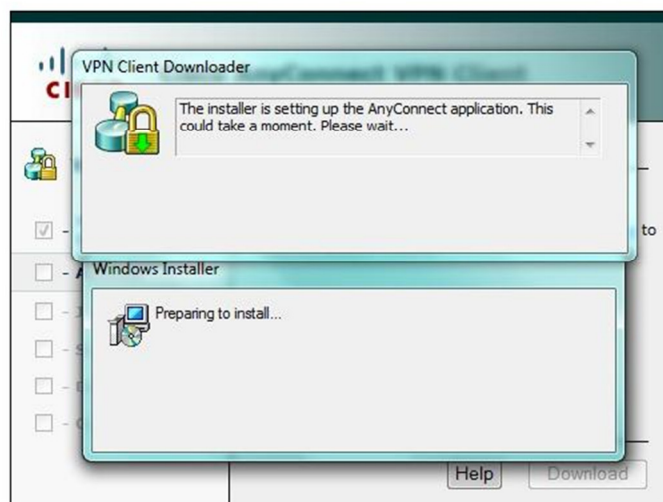

You'll then see the window below:

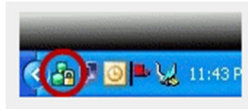

Click Install again and then you'll see the window below:

Click Yes and then you'll see the next screen below:

Wait for this to finish and then you should see this icon next to your time in the lower right hand corner:

Once the install is complete, it will automatically connect to the RHA network and you will see the AnyConnect icon like the one circled in the image above in the bottom right hand corner of your screen. To close out the VPN session, go to the icon in your system tray, right click, and select quit.

Once you are finished on the VPN, you can simply right-click on the AnyConnect icon that is located by the time and click Disconnect. The client only needs to be installed on your personal computer once. When you want to reconnect, you can either go to the RHA website mentioned above, or simply open the Cisco AnyConnect client that has been installed on the computer and enter your username and password.
